Art Unit: 2673

#### **DETAILED ACTION**

### **Drawings**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "the connector for coupling to a flat panel display"; "a flat panel display controller"; "internal timer"; "a clock counter", and "a flat panel display being coupled/decoupled to/from the connector" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### Specification

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required:

The **specification does not provide support** to the following claim limitations as originally filed.

In claim 1, line 1 the recitation of the claim "detecting a monitor";

Application/Control Number: 09/432,855

Art Unit: 2673

# Line 2, "monitoring a first node of a connector";" the connector for coupling to a flat panel display"

Lines 4-5, "asserting a first output signal to <u>indicate the first</u>

node is a first state; and receiving the first output signal <u>at a flat</u>

panel display controller";

In claim 6, the phrase "wherein the step of determining includes. ...When the input is stable for a predetermined amount of time";

In claim 7, "wherein the predetermined amount of time is based upon an internal timer";

In claim 9, "wherein the register value is indicative of a clock count";

In claims 11 and 12, "a flat panel display being coupled/decoupled to/from the connector".

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) The invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Application/Control Number: 09/432,855 Page 4

Art Unit: 2673

1. Claims 1-3,5-7,10-13 are rejected under 35 U.S.C. 102(e) as being anticipated by **Verdun et al** (6,493,782).

As to claims 1-3,5-7,10-13 **Verdun et al** (hereinafter **Verdun**) clearly teaches monitoring the first node of a connector (fig.3 (230)), the connector for coupling to a flat panel display (fig.1 (42,45)); asserting a first output signal to indicate the first node is in a first state (fig.3 (240,310); and receiving the first output signal at a flat panel display controller. Furthermore, **Verdun** discloses the first output signal is an interrupt signal (fig.3 (240), 4 (360,370)) and it is for general purpose of a computer (see, abstract); determining if the first input is in a stable sate before the step of asserting for a predetermined time (fig.3 (250,260, COL.2, lines 49-54); operating in a normal mode prior to monitoring (fig.3 (210)). it is inherent for **Verdun** display to have a display panel controller to receive an output signal and to drive the flat panel display.

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 5

Application/Control Number: 09/432,855

Art Unit: 2673

5. Claims 4,8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Verdun et al** (6,493,782).

As to claims 4,8 and 9, **Verdun** discloses a first signal output and first input signal for a predetermined amount of time (fig.3 (240,250), fig.4 (360,370); col.2, lines 49-54), but has failed to disclose the first output signal and the predermined amount of time are stored in a register. However; it would have been obvious to one skill in the art to recognized that the first output signal and the first output signal predetermined period or time of **Verdun** must be stored in some kind of memory or storage In order run the program (figs.3 and 4).

## Response to Arguments

6. Applicant's arguments filed on 11/25/03 have been fully considered but they are not persuasive. The applicant argues that **Verdun et al** does not teach detecting a monitor nor for detecting a flat panel display. The examiner did not give weight to the preamble "detecting a monitor". The Examiner will direct the Applicant to the Board's decision on the preamble. "Generally, the preamble does not limit the claims...the preamble may be limiting 'when the claim drafter choose to use both the preamble and the body to define the subject matter of the claimed invention." Allen Eng'g corp. V.

Bartell Indus., V. Darragh Co., 63 USPQ2d 1769.1774 (Fed.Cir. 2002).

As to **Verdun et al** does not teach detecting a flat panel display. The Applicant never claimed detecting a flat panel display.

Application/Control Number: 09/432,855

Art Unit: 2673

Applicant also argues that **Verdun et al** does not teach or suggest monitoring of a connector coupled to a flat panel display. The examiner strongly disagrees with Applicant's assertion. What applicant is claming "monitoring a first node of the connector, the connector for coupling to a flat panel display"? Verdun et al clearly teaches checking the status of dock pins on connector [see, fig.3 (230)] and figure 1 shows the connector [42] coupling to a flat panel display [45]. The claim never recites, "Monitoring of a connector coupled to a flat panel display".

### Conclusion

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
